

Annexe 10 de l'ordonnance du DFI sur les matériaux et objets destinés à entrer en contact avec les denrées alimentaires

Liste des substances admises pour la fabrication des encres d'emballage et exigences y relatives

Edition : 2.1

Entrée en vigueur : 1^{er} décembre 2020

Liste des substances admises pour la fabrication des encres d'emballage et exigences y relatives

1 Liste des substances

1.1 Explications des colonnes du tableau 1

Le tableau 1 contient les informations suivantes:

- | | |
|-----------|---|
| Colonne 1 | N° de la substance: le numéro d'identification de la substance dans les annexes 2, 9 et 10 de cette ordonnance. |
| Colonne 2 | Dénomination de la substance: la dénomination chimique. |
| Colonne 3 | N° CAS: le numéro d'enregistrement CAS (<i>Chemical Abstracts Service</i>). |
| Colonne 4 | N° Réf.: N° de référence de la substance de la Commission européenne dans le domaine des matériaux d'emballage. |
| Colonne 5 | Utilisation comme: I liant (monomère ou autre substance de départ) (M) II colorant ou pigment (C) III solvant (inclus les « energy curing monomers ») (S), IV additif (sans les additifs utilisés lors de la fabrication des colorants et pigments) (AD) V photoinitiateur (P). |
| Colonne 6 | Classification de la substance (Partie A ou B). |
| Colonne 7 | LMS [mg/kg]: la limite de migration spécifique applicable à la substance présente dans des matériaux et objets imprimés. Elle est exprimée en mg de substance par kg de denrée alimentaire. La mention «ND» (non décelable) est indiquée lorsque aucune migration de la substance n'est autorisée. La conformité est établie à l'aide des méthodes d'essai de migration adéquates sélectionnées conformément à l'article 11 du règlement (CE) n° 882/2004 qui peuvent confirmer l'absence de migration au-delà d'une limite de détection déterminée. Si des limites de détection spécifiques n'ont pas été fixées pour des substances ou groupes de substances déterminés, une limite de détection de 0,01 mg/kg s'applique. Elle s'applique à un groupe de composés, s'ils sont structurellement et toxicologiquement liés (en particulier les isomères ou composés ayant le même groupe fonctionnel pertinent) ou aux substances individuelles qui ne sont pas liées, et inclut un éventuel transfert non désiré. Une limite de migration spécifique générique de 60 mg/kg s'applique aux substances pour lesquelles aucune limite de migration spécifique ou autre restriction n'est indiquée. |
| Colonne 8 | LMS(T) (N° de restriction de groupe): le numéro d'identification du groupe de substances auquel la restriction de groupe définie dans le tableau 2, colonne 1. |
| Colonne 9 | Restrictions et spécifications: les restrictions autres que la limite de migration spécifique ainsi que les spécifications applicables à la substance considérée. Cette colonne contient également d'autres informations concernant la substance. |

Si une substance figurant dans la liste comme composé spécifique est également couverte par un terme générique, les restrictions applicables à cette substance sont celles qui sont indiquées pour le composé spécifique.

1.2 Significations des abréviations utilisées

Les abréviations utilisées dans les listes signifient :

- | | |
|------|---|
| C.I. | = Color Index |
| DL | = limite de détection de la méthode d'analyse |
| ECM | = Energy curing monomers |
| EO | = oxyde d'éthylène |
| FP | = objet fini |
| MW | = masse molaire |

1.3 Définitions et explications concernant les listes I - V de la colonne 5 (Utilisation)

1.3.1 Liste des liants (monomères ou autres substances de départ, M) : liste I

Par liants (monomères ou autres substances de départ), on entend toutes les substances entrant dans la synthèse des macromolécules telles que:

- a. les substances entrant dans la polymérisation, la polycondensation, la polyaddition et autres procédés similaires;
- b. les substances naturelles ou synthétiques, également de poids moléculaire élevé, utilisées pour la synthèse ou la modification de macromolécules naturelles ou synthétiques.

1.3.2 Liste des additifs (AD): liste IV

La liste IV de l'annexe comprend une liste exhaustive des substances qui sont:

- a. incorporées aux encres aux fins d'obtenir un effet technique dans le produit fini et qui, conformément à la destination de celui-ci, y subsistent;
- b. utilisées pour obtenir un milieu polymérisant approprié (par ex. les émulsifiants, les surfactants, les substances tampons, etc.).

Ne figurent pas dans la liste IV de l'annexe les substances qui influencent directement la formation de polymères (par ex. les catalyseurs) ainsi que les additifs utilisés lors de la fabrication des colorants et des pigments.

2 Restrictions, spécifications et exigences particulières

2.1 Restrictions de groupe applicables à certaines substances

Le tableau 2 sur les restrictions de groupe contient les informations suivantes:

- Colonne 1 N° de restriction de groupe: le numéro d'identification du groupe de substances auquel la restriction s'applique. Il s'agit du numéro mentionné dans la colonne 8 du tableau 1.
- Colonne 2 N° de la substance: les numéros d'identification des substances auxquelles la restriction de groupe s'applique. Il s'agit du numéro mentionné dans la colonne 1 du tableau 1.
- Colonne 3 Dénomination de la substance
- Colonne 4 LMS (T) [mg/kg]: la limite de migration spécifique totale pour la somme des substances applicable au groupe concerné. Elle est exprimée en mg de substance par kg de denrée alimentaire.

La mention «ND» (non décelable) est indiquée lorsque aucune migration de la substance n'est autorisée. La conformité est établie à l'aide des méthodes d'essai de migration adéquates sélectionnées conformément à l'article 11 du règlement (CE) n° 882/2004 qui peuvent confirmer l'absence de migration au-delà d'une limite de détection déterminée. Si des limites de détection spécifiques n'ont pas été fixées pour des substances ou groupes de substances déterminés, une limite de détection de 0,01 mg/kg s'applique. Elle s'applique à un groupe de composés, s'ils sont structurellement et toxicologiquement liés (en particulier les isomères ou composés ayant le même groupe fonctionnel pertinent) ou aux substances individuelles qui ne sont pas liées, et inclut un éventuel transfert non désiré.

- Colonne 5 Spécification de la restriction de groupe: une indication de la substance dont la masse moléculaire sert de base à l'expression du résultat.

* Dans la colonne 2, les substances suivis d'un * ne sont listées que dans l'annexe 2 (matières plastiques)

2.2 Restrictions pour certaines substances

2.2.1 Les substances qui figurent dans la Partie B de la colonne 6 du Tableau 1 ne peuvent être utilisées que si les deux conditions suivantes sont remplies :

- les substances ne doivent pas être classées comme «mutagènes», «cancérogènes» ou «toxiques pour la reproduction» (substances CMR) de catégorie 1A, 1B ou 2, définies à l'annexe 2 ch. 1 de l'ordonnance du 5 juin 2015 sur les produits chimiques (OChim)¹;
- aucune migration de la substance n'est autorisée. La conformité est établie à l'aide des méthodes d'essai de migration adéquates sélectionnées conformément à l'article 11 du règlement (CE) n° 882/2004 qui peuvent confirmer l'absence de migration au-delà d'une limite de détection déterminée. Si des limites de détection spécifiques n'ont pas été fixées pour des substances ou groupes de substances déterminés, une limite de détection de 0,01 mg/kg s'applique. Elle s'applique à un groupe de composés, s'ils sont structurellement et toxicologiquement liés (en particulier les isomères ou composés ayant le même groupe fonctionnel pertinent) ou aux substances individuelles qui ne sont pas liées, et inclut un éventuel transfert non désiré.

2.2.2 Les substances produites intentionnellement sous une forme nanométrique ne peuvent être utilisées que si elles sont admises comme telles aux annexes 2 et 10. Les colorants et pigments contenant des nanoparticules peuvent être utilisés pour autant qu'aucune nanoparticule ne migre dans la denrée alimentaire.

2.2.3 Les amines aromatiques primaires qui ne figurent pas dans le tableau 1 ne peuvent pas migrer ou ne peuvent pas être libérées par les matériaux et objets en matière imprimés dans la denrée alimentaire ou le simulant. La conformité est établie à l'aide des méthodes d'essai de migration adéquates sélectionnées conformément à l'article 11 du règlement (CE) n° 882/2004 qui peuvent confirmer l'absence de migration au-delà d'une limite de détection déterminée. Si des limites de détection spécifiques n'ont pas été fixées pour des substances ou groupes de substances déterminés, une limite de détection de 0,01 mg/kg s'applique à la somme des amines aromatiques primaires libérées.

2.2.4 Substances avec une restriction d'utilisation (colonne 10) de l'annexe 2 : seules les substances reprises dans l'annexe 10 sont admises pour la fabrication des encres d'emballage.

¹ RS 813.11

- 2.2.5 Dans les matériaux et objets imprimés, les valeurs de migration des substances mentionnées dans les annexes 2 et 10 ne peuvent dépasser les valeurs spécifiques de migration fixées dans ces annexes en tenant compte également de l'apport du support.
- 2.2.6 Les matériaux et objets imprimés ne peuvent libérer les substances suivantes en quantités supérieures aux limites de migration spécifiques ci-dessous:

| Substance | LMS [mg/kg de denrée alimentaire ou de simulant alimentaire] |
|------------------|---|
| Aluminium | 1 |
| Baryum | 1 |
| Cobalt | 0,05 |
| Cuivre | 5 |
| Fer | 48 |
| Lithium | 0,6 |
| Manganèse | 0,6 |
| Nickel | 0,02 |
| Zinc | 5 |
